Introduction to Concept of East Africa Environment

Welcome to this introductory lecture on the East African Environment. It will help you to understand the strategic importance of the region, given its location and size, explain the concept of the environment and highlight the relevance of Geography as an integrative discipline. The East African Environment is a region marked by a striking diversity in its topography, soils, climate, flora, fauna and human activities. In fact, it is the keynote of the geography of the region and helps to explain its distinctiveness in this part of Africa.
